

DB-889D

16 Channel Analog Multiplexer Board

Functional Description

The DB-889D is an expansion multiplexer/ amplifier board for use with A-82X and PCI-1800 series. Each 889D multiplexes 16 differential analog input channels into one analog input of the DAS board. It provides software programmable gains of 0.5, 1, 5, 10, 50, 100, 500 and 1000. Thermocouple measurement are handled easily with 889D. The board includes cold-junction sensing and compensation circuitry that provides a scaling of 24.4mV/°C. Biasing resistors are included for open thermocouple detection. The 889D can be cascaded to a total of 128 channels of voltage measurements or 112 channel of thermocouple measurement.

Features

- Connects directly to A-82X, PCI-1800 series DAS board
